

Finding Nemo Relationships

Name _____ Class Period _____

We have now learned about 4 different types of organism relationships. They are as follows:

Symbiotic Relationships

Mutualism: Both organisms benefit.

Commensalism: One organism benefits. The other is not harmed or benefited.

Parasitism: One organism benefits. The other organism is harmed.

Predation: One benefits, one is harmed.

Other Relationships

Predator/Prey: The interaction between a species that eats (predator) another species (prey).

Your assignment is to list and describe different relationships that are seen in Finding Nemo. You need to describe 10 relationships overall. Your list must include at least one example of each type of relationship listed above.

Example- Relationship Type: Mutualism Description: The anemone provides a home for the clownfish. The clownfish lures in other food for the anemone. Both benefit.

Relationship Type	Description (Example)
Mutualism	Anemone provides protection for clown fish. Clown fish removes bacteria from anemone.
